**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (AAPA) in view of Tsay et al (US patent 6,529,237).

As per claims 1-6, AAPA (Figure 1) teaches a correlated double sampling circuit including all the limitations except the capacitors being variable capacitors. However, Tsay et al (Herein after Tsay) teach a correlated double sampling circuit comprising a variable capacitor (Figure 5).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify AAPA's correlated double sampling circuit with Tsay's variable capacitance network for the purpose of varying the overall effective capacitance of the input sampling capacitor and selectively control a signal gain.

3. Art of general nature relating to correlated double sampling circuits has been cited for applicant's review.
